MINERVA

Challenge on LLM Scalability

Andrea Valenti - AI Research Engineer
Beatrice Del Frate - AI Product Manager

Domyn

Minerva AI Winter School, 27 February 2026

About Domyn

We are a company dedicated to researching and developing Responsible AI for highly regulated industries. Our mission is to build transparent, compliant, and safe AI systems. Here's a snapshot of our journey so far, in numbers.

2016 Founding year

20+ Top-tier customers

150+ Team members

25 Countries represented

15 Spoken languages

Domyn | Agents

Domyn | Platform

Domyn | Models

We make it our mission to empower enterprises with AI they can own, govern, and trust — safeguarding sovereignty, protecting intellectual property, and preserving the private knowledge that drives their advantage.

Our vision is to advance responsible intelligence to elevate humankind, by making AI secure, accessible, and aligned with human values. We help leaders adopt AI intentionally and autonomously, releasing its full potential to solve real-world challenges — on their terms.

Uljan Sharka

About AI Research Team

In Domyn, we are developing proprietary Language Models since 2016, and we are specializing in LLMs since 2024.

LLM Scalability Challenge

🎯 Goal

The goal of this challenge is to make you experiment with a multi-GPU, multi-node training of real, production-scale LLMs.

⚒️ Instructions

- You will work on three different models:
  - Qwen3 1.7B
  - Qwen3 32B
  - Llama4 17Bx16e
- You will try to scale each one of them:
  - first scale to as many nodes as possible
  - then play with the parallellization settings to achieve the best mean MFU

🎖️ Evaluation Criteria

The winning team will be the one with better MFU stability (that is, the one with the lowest drop in MFU as the number of nodes increases), averaged over the three models.

⏰ Timing

- 9.00 - 13.00 Challenge time
- 13.00 - 14.00 Lunch break
- 14.00 - 16.00 Presentations
- 16.00 - 17.00 Final ceremony

Let's get started!

1) Clone the full Git repository:

🔗 https://github.com/minerva4ai-eu/LLM_challenge

2) Access "data" folder (model checkpoints and datasets) from Leonardo with this path:

/leonardo_work/tra26_minwinsc/LLM_challenge_2/LLM_challenge/data

🍀 *Good Luck!!* 🍀
